2.4 ACCESSORIES

A. Fasteners:

Use fasteners designed for wood trim and siding (thinner shank, blunt point, full round head).
Use a highly durable fastener such as stainless steel or hot dipped galvanized steel.
Staples, small brads and wire nails must not be used as fastening members.
Fasteners should be long enough to penetrate a solid wood substrate a minimum of 1-1/2 inch (38 mm).
The use of standard nail guns is acceptable.
Use two fasteners per every framing member for trimboard applications. Use additional fasteners for trimboards 12 inches (305 mm) or wider, as well as sheets.
Install fasteners no more than 2 inches (51 mm) from the end of the board.
Fasten trim into a flat, solid substrate. Fastening trim into hollow or uneven areas must be avoided.
Pre-drilling is typically not required unless a large fastener is used or product is being installed in low temperatures.

B. Adhesives:

Glue all trim joints (scarf or miter) with a cellular PVC cement/adhesive such as TrimTight or Extreme PVC TrimWelder.
Glue joints should be secured with a fastener and/or fastened on each side of the joint to allow adequate bonding time.
Surfaces to be glued should be smooth, clean and in complete contact with each other.
Various adhesives may be used. Consult adhesive manufacturer to determine suitability.

C. Sealants:

Use urethane, polyurethane or acrylic based sealants without silicone as specified in Section 07910.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Do not begin installation until substrates have been properly prepared.
- B. Prior to installation, verify governing dimensions of and condition of substrate.
- C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

- A. Clean surfaces thoroughly prior to installation.
- B. Examine, clean, and repair as necessary any substrate conditions that would be detrimental to proper installation.
- C. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
Comply with all terms necessary to maintain warranty coverage.
Use trim details indicated on Drawings.
Touch up all field cut edges before installing.
- B. Cutting:
Use carbide tipped blades designed to cut wood. Do not use fine-tooth metal-cutting blades or plywood blades.
Avoid rough edges from cutting caused by: excessive friction, poor board support, worn saw blades or badly aligned tools.
- C. Drilling:
Drill with standard woodworking drill bits.
Do not use bits made for rigid PVC.
Avoid frictional heat build-up and remove shavings from the drill hole frequently.
- D. Milling:
Mill using standard milling machines used to mill lumber.
Relief angle 20 to 30 degrees.
Cutting speed to be optimized with the number of knives and feed rate.
- E. Routing:
Use sharp carbide tipped router bits.
- F. Edge Finishing:
Use machine edging, sanding, grinding, or filling to finish edges.
- G. Nail Location:
Refer to fastening schedule and diagrams in the most current version of the manufacturer's installation manual for recommended fastener spacing.
Install fasteners no more than 3/4 inches (19 mm) from the end of each board.
- H. Thermal Expansion and Contraction:
Expansion and contraction will occur with changes in temperature.
When properly fastened, allow 1/4 inch (6 mm) per 18 foot (5.49 m) for expansion and contraction.
Joints between pieces should be glued to eliminate joint separation. When gaps are glued on a long run, allow for expansion and contraction at the end of the runs.
- I. Finishing.
Correct dents and gouges before applying final coating.
Prepare surfaces and paint materials as recommended by the molding manufacturer. Paint as specified in Section 09900.
If moldings get dirty during installation, clean with a soft bristle brush and a bucket of soapy water. For stubborn stains, mold or mildew, use a cleaner suitable for PVC products.

3.4 PROTECTION

- A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.
